Critical Licensing System Security Update

Affected: AGi32 versions ≤ 2.34 , Photometric Toolbox versions ≤ 1.86

Issue: A system level function call, used by referenced software versions to identify your computer to our licensing sever, has been deprecated by Microsoft in Windows 8. The function no longer returns the correct information when these software versions are installed on Windows 8 systems.

AGi32 version 2.35 and Photometric Toolbox 1.87 (and newer) have been upgraded to the latest version of this function call to insure future compatibility with Windows 8.

Unfortunately, and we were not aware at the time, the Windows 8 results reported by the older function call created a serious security breach in our licensing system. We were recently forced to close this security threat by rejecting the data from the obsolete function at the licensing server.

Ramifications: the affected versions of AGi32 and Photometric Toolbox will no longer function within Windows 8 environments.

Options:

- Transfer the software to a computer using Windows 7, Vista or XP.
- Purchase an upgrade. Special incentives may be available when you mention this issue when contacting Lighting Analysts (help@agi32.com, info@agi32.com)
