## **AGi32 v 1.9 lighting design and rendering software**

### **Enhanced Photorealism and Animated Rendering will make for Outstanding Architectural Lighting Presentations**

**Littleton, Colorado – April 3, 2006** – Version 1.9 of *AGi32* lighting design and rendering software has 17 new or revised features. Designers will enjoy the animated rendering feature, which gives them the ability to create multi-scene animations (movies) from lighting project renderings. Several high-level additions have been made to the program's ray-trace processing; glossy surface support, shadow softening and Perlin noise cloud cover, all move *AGi32*'s presentation images closer to photorealism. Additional enhancements such as the new 3D photometric web, sophisticated project management and improved 3D import functionality make version 1.9 the most exciting version of *Agi32* to date.

A demo of *AGi32* 1.9 can be downloaded from **[www.agi32.com](http://www.agi32.com)**.
