## Announcing ElumTools™ 2013.4

---

Littleton, Colorado, USA – March 4, 2013

Lighting Analysts, Inc., a world leader in lighting design and calculation software is pleased to announce the availability of ElumTools 2013.4, an enhanced version of our software add-in to Autodesk® Revit® 2013.

ElumTools 2013.4 contains the debut of the Layout Assistant. A ground breaking new capability developed to assist users in placing Luminaires (lighting fixtures) accurately within their Revit projects. Using the new Layout Assistant within ElumTools, users can accurately predict the quantity of luminaires required to meet a specific light level or power density within any Revit Room or Space, select from several possible luminaire position layouts and export the luminaire positions and calculations back into the Revit view of choice.

The Layout Assistant is unique in that it is the first estimator to be able to accurately work with Rooms or Spaces of any shape. Revit users with ElumTools can now intelligently place their luminaires without guesswork or the use of external software.
