Announcing ElumTools™ 2015

Littleton, Colorado, USA – May 23, 2014

Lighting Analysts, Inc., a world leader in lighting design and calculation software is pleased to announce the availability of ElumTools 2015, the latest generation of our software add-in for Autodesk® Revit®. ElumTools 2015 is specifically designed for operation within Revit® 2015.

ElumTools 2015 incorporates a new, optional strategy when mapping Revit materials to suitable architectural reflectances for lighting calculations by providing the ability to map by Revit Category. This means all members of a particular category (ceiling types for example) can be mapped to a single reflectance value in one step as opposed to setting them individually. Similar categories such as walls and floors can also be mapped accurately in a single step. Yet another example would be all “Daylight Transition Surfaces”, a special ElumTools category.

“The ability to shortcut the material mapping process to standardize reflectances for ceiling, walls and floors is something we have heard from many users wanting the ability to quickly assess lighting results without having to pay close attention to every Revit material that might impact each individual Room or Space”, says Dave Speer, Director of Sales and Marketing for Lighting Analysts. “This is saving users a ton of time”!

Learn all about lighting calculations inside of Revit using ElumTools at www.elumtools.com . A free 30-day Trial version can be found in the Downloads area.
