

June 24, 2005

**Lighting Analysts, Inc.**  
Littleton Colorado U.S.A.

FOR IMMEDIATE RELEASE -----

Effective June 23, 2005, Lighting Analysts will no longer sell the AGI-Light software program. Changing technologies and market dynamics have rendered the AGI-Light software ineffective in filling its role as an introductory software package.

In today's market, professionals from many walks of industry are expected to perform basic lighting computations. Within this broad market scope, we feel the AGI-Light software is no longer in position to provide the best experience for all users. As we pride ourselves in providing nothing but the best in lighting software for our target markets, we feel AGI-Light no longer belongs in our product mix.

We will, of course, continue to focus on the development of our flagship software product AGI32 as well as specialty product Photometric Toolbox and our new web-based Flash series of software. Introductory level lighting calculations may be addressed in the future with other products.

We invite you to visit [www.agi32.com](http://www.agi32.com) for information on AGI32 and our other lighting software programs.
